Dear Blackpoint Cyber Hiring Team,

I am applying for the IT Systems Administrator role. The posting describes the work I do every day: keeping a distributed company productive, running onboarding and offboarding cleanly, and administering Microsoft 365 and the device fleet.

At hear.com I administer Microsoft 365 and Entra ID for 450+ US users and 1,400+ employees globally, including user, group and license administration, MFA and access requests. I run endpoint management through Intune for Windows and Mosyle for Apple devices, and I managed Macs through Jamf before that, so I am comfortable supporting both macOS and Windows. I handle device provisioning, imaging, replacements and hardware lifecycle for a workforce spread across the US, Germany and India, and I coordinate escalations with Microsoft Support and outside vendors.

I also automate what repeats. In PowerShell I have bulk-updated Active Directory proxyAddresses to set up user email aliases, and I scripted the removal of a faulty Windows feature update that was crashing Lenovo laptops. I keep SOPs, onboarding frameworks and knowledge documentation current, run periodic access reviews, and as hear.com's Security Compliance Officer I gather evidence and keep records audit-ready for HIPAA and PCI DSS. I have not worked in a SOC 2 or CMMC audit yet, but the evidence habits carry over.

I hold CompTIA Security+, Network+ and A+. I work well remotely and across time zones, and I would like a role with a path toward identity or systems engineering.

Thank you for your time and consideration. I would welcome the chance to talk.
