Dear Hivelocity Hiring Team,

I am applying for the Windows System Engineer role at Hivelocity. Windows Server, Active Directory, Microsoft 365 and PowerShell make up most of my daily work, and I would like to focus on them full time.

At hear.com I administer Microsoft 365 and Entra ID for 1,400+ users, with Exchange Online and the surrounding identity lifecycle. I use PowerShell for real operational problems: I automated bulk updates to the Active Directory proxyAddresses attribute to set up email aliases, and I wrote the scripted removal of a Windows feature update that was crashing certain Lenovo laptops. I manage endpoint security through Intune and Defender for Endpoint, monitor events in Microsoft Sentinel, and keep SOPs and documentation current. I also work with Linux and VMware.

I have served as an escalation point on complex issues and I am comfortable explaining technical problems to non-technical colleagues. I hold CompTIA Security+, Network+ and A+, and I have a UniFi Full Stack Professional certification for networking. I live in Miami and am glad to work remotely, with occasional trips to Tampa when needed.

Thank you for your time and consideration. I would welcome the chance to talk.
